Projects

QueryMgr - Unit Testing - SurvyMgr

December 2013 — Present

I have been further enhancing the unit testing of the reusable VB6 code with VBUnit3 with plans to also use the SQL query storage and report generation features of QueryMgr in a more data-driven version of SurvyMgr.

In the creation of some of the newer Functions(), I have followed a more test-driven approach by creating the Unit Testing code before the actual implementation code.

The goal... **more**

NSIS + Windows7x64

July 2013 — August 2013

With guidance from several forums, including: http://www.vbforums.com/ and http://forums.winamp.com/ , I upgraded my freeware applications to work with the new developments that are a part of Windows7, both 32 and 64 bit frameworks.

With WindowsXP and earlier, I have been accustomed to installing my applications with all of their reference files and data in their own folder structure, located... **more**

QueryMgr

January 2013

I have created several programs that store data in databases. I include with them several queries to generate reports. There can be a wish for a few more reports. Sometimes I modify the application to incorporate the new reports.

I thought it would be good to have queries and reports that were 'data driven'. My next thought was why complicate the data entry application with a data ... **more**

2007 – Present (8 years)

NSIS (Nullsoft Scriptable Install System) is a professional open source system to create Windows installers.
It is available from: http://nsis.sourceforge.net/Main_Page

I have learned how to use it to create a compact install file for each of my free-ware applications. I have tested all four installation packages on Windows XP, Vista and Windows 7 in their 32Bit and 64Bit systems. Each install file uses internal logic to detect 'AtLeastWinVista' and make the adjustments needed.

I have also learned how to incorporate reg-free COM installations that copy the needed support files (.dll, .ocx, .olb, .tlb, ...) into the Install Directory and make them available to the application without altering the Windows Registry. This is important to assure that the application does not interfere with other applications nor can be disturbed by other applications on your PC.

I also learned how to create a custom page to explain these requirements.

The Install files are compact and work rapidly. I have created a How To Install slideshow and placed it on my website.

Volunteer

CollectiveNet

2009 – Present (6 years) | Colorado Front Range Area

CollectiveNet is an umbrella organization for a selection of local meetings to help job seekers. CollectiveNet and its local meetings have been helping job seekers in the Front Range find their

Volunteer Database Developer

Colorado Mission of Mercy

March 2011 – October 2011 (8 months) | Colorado

The Problem: Entering data from forms filled-in at a major event (1400 respondents). Data Entry and compiling 2010's annual report took months!

This event is the annual Colorado Mission of Mercy dental clinic. In one day, a complete dental field hospital is setup and for a two day Dental Clinic provided by the volunteer Dentists and Dental Staff.

I listened to the CoMoM representatives, reviewed last year's data entry forms and the annual report. I modeled a preliminary database with its tables and relationships. I imported last year's data as an example for a working model.

I updated one of my Freeware Applications, Survey Manager, to provide for data entry into the customized 'survey' forms and record the Dental Treatment of the Patients.
